Preface

Probability and statistics are fascinating subjects on the interface between mathematics and applied sciences that help us understand and solve practical problems. We believe that you, by learning how stochastic methods come about and why they work, will be able to understand the meaning of statistical statements as well as judge the quality of their content, when facing such problems on your own. Our philosophy is one of *how* and *why*: instead of just presenting stochastic methods as cookbook recipes, we prefer to explain the principles behind them.

In this book you will find the basics of probability theory and statistics. In addition, there are several topics that go somewhat beyond the basics but that ought to be present in an introductory course: simulation, the Poisson process, the law of large numbers, and the central limit theorem. Computers have brought many changes in statistics. In particular, the bootstrap has earned its place. It provides the possibility to derive confidence intervals and perform tests of hypotheses where traditional (normal approximation or large sample) methods are inappropriate. It is a modern useful tool one should learn about, we believe.

Examples and datasets in this book are mostly from real-life situations, at least that is what we looked for in illustrations of the material. Anybody who has inspected datasets with the purpose of using them as elementary examples knows that this is hard: on the one hand, you do not want to boldly state assumptions that are clearly not satisfied; on the other hand, long explanations concerning side issues distract from the main points. We hope that we found a good middle way.

A first course in calculus is needed as a prerequisite for this book. In addition to high-school algebra, some infinite series are used (exponential, geometric). Integration and differentiation are the most important skills, mainly concerning one variable (the exceptions, two dimensional integrals, are encountered in Chapters 9–11). Although the mathematics is kept to a minimum, we strived

to be mathematically correct throughout the book. With respect to probability and statistics the book is self-contained.

The book is aimed at undergraduate engineering students, and students from more business-oriented studies (who may gloss over some of the more mathematically oriented parts). At our own university we also use it for students in applied mathematics (where we put a little more emphasis on the math and add topics like combinatorics, conditional expectations, and generating functions). It is designed for a one-semester course: on average two hours in class per chapter, the first for a lecture, the second doing exercises. The material is also well-suited for self-study, as we know from experience.

We have divided attention about evenly between probability and statistics. The very first chapter is a sampler with differently flavored introductory examples, ranging from scientific success stories to a controversial puzzle. Topics that follow are elementary probability theory, simulation, joint distributions, the law of large numbers, the central limit theorem, statistical modeling (informal: why and how we can draw inference from data), data analysis, the bootstrap, estimation, simple linear regression, confidence intervals, and hypothesis testing. Instead of a few chapters with a long list of discrete and continuous distributions, with an enumeration of the important attributes of each, we introduce a few distributions when presenting the concepts and the others where they arise (more) naturally. A list of distributions and their characteristics is found in Appendix A.

With the exception of the first one, chapters in this book consist of three main parts. First, about four sections discussing new material, interspersed with a handful of so-called Quick exercises. Working these—two-or-three-minute—exercises should help to master the material and provide a break from reading to do something more active. On about two dozen occasions you will find indented paragraphs labeled *Remark*, where we felt the need to discuss more mathematical details or background material. These remarks can be skipped without loss of continuity; in most cases they require a bit more mathematical maturity. Whenever persons are introduced in examples we have determined their sex by looking at the chapter number and applying the rule “He is odd, she is even.” Solutions to the quick exercises are found in the second to last section of each chapter.

The last section of each chapter is devoted to exercises, on average thirteen per chapter. For about half of the exercises, answers are given in Appendix C, and for half of these, full solutions in Appendix D. Exercises with both a short answer and a full solution are marked with \boxplus and those with only a short answer are marked with \boxminus (when more appropriate, for example, in “Show that . . .” exercises, the short answer provides a hint to the key step). Typically, the section starts with some easy exercises and the order of the material in the chapter is more or less respected. More challenging exercises are found at the end.

Much of the material in this book would benefit from illustration with a computer using statistical software. A complete course should also involve computer exercises. Topics like simulation, the law of large numbers, the central limit theorem, and the bootstrap loudly call for this kind of experience. For this purpose, all the datasets discussed in the book are available at <http://www.springeronline.com/1-85233-896-2>. The same Web site also provides access, for instructors, to a complete set of solutions to the exercises; go to the Springer online catalog or contact textbooks@springer-sbm.com to apply for your password.

Contents

1	Why probability and statistics?	1
1.1	Biometry: iris recognition	1
1.2	Killer football	3
1.3	Cars and goats: the Monty Hall dilemma	4
1.4	The space shuttle <i>Challenger</i>	5
1.5	Statistics versus intelligence agencies	7
1.6	The speed of light	9
2	Outcomes, events, and probability	13
2.1	Sample spaces	13
2.2	Events	14
2.3	Probability	16
2.4	Products of sample spaces	18
2.5	An infinite sample space	19
2.6	Solutions to the quick exercises	21
2.7	Exercises	21
3	Conditional probability and independence	25
3.1	Conditional probability	25
3.2	The multiplication rule	27
3.3	The law of total probability and Bayes' rule	30
3.4	Independence	32
3.5	Solutions to the quick exercises	35
3.6	Exercises	37

4	Discrete random variables	41
4.1	Random variables	41
4.2	The probability distribution of a discrete random variable	43
4.3	The Bernoulli and binomial distributions	45
4.4	The geometric distribution	48
4.5	Solutions to the quick exercises	50
4.6	Exercises	51
5	Continuous random variables	57
5.1	Probability density functions	57
5.2	The uniform distribution	60
5.3	The exponential distribution	61
5.4	The Pareto distribution	63
5.5	The normal distribution	64
5.6	Quantiles	65
5.7	Solutions to the quick exercises	67
5.8	Exercises	68
6	Simulation	71
6.1	What is simulation?	71
6.2	Generating realizations of random variables	72
6.3	Comparing two jury rules	75
6.4	The single-server queue	80
6.5	Solutions to the quick exercises	84
6.6	Exercises	85
7	Expectation and variance	89
7.1	Expected values	89
7.2	Three examples	93
7.3	The change-of-variable formula	94
7.4	Variance	96
7.5	Solutions to the quick exercises	99
7.6	Exercises	99
8	Computations with random variables	103
8.1	Transforming discrete random variables	103
8.2	Transforming continuous random variables	104
8.3	Jensen's inequality	106

8.4	Extremes	108
8.5	Solutions to the quick exercises	110
8.6	Exercises	111
9	Joint distributions and independence	115
9.1	Joint distributions of discrete random variables	115
9.2	Joint distributions of continuous random variables	118
9.3	More than two random variables	122
9.4	Independent random variables	124
9.5	Propagation of independence	125
9.6	Solutions to the quick exercises	126
9.7	Exercises	127
10	Covariance and correlation	135
10.1	Expectation and joint distributions	135
10.2	Covariance	138
10.3	The correlation coefficient	141
10.4	Solutions to the quick exercises	143
10.5	Exercises	144
11	More computations with more random variables	151
11.1	Sums of discrete random variables	151
11.2	Sums of continuous random variables	154
11.3	Product and quotient of two random variables	159
11.4	Solutions to the quick exercises	162
11.5	Exercises	163
12	The Poisson process	167
12.1	Random points	167
12.2	Taking a closer look at random arrivals	168
12.3	The one-dimensional Poisson process	171
12.4	Higher-dimensional Poisson processes	173
12.5	Solutions to the quick exercises	176
12.6	Exercises	176
13	The law of large numbers	181
13.1	Averages vary less	181
13.2	Chebyshev's inequality	183

13.3	The law of large numbers	185
13.4	Consequences of the law of large numbers	188
13.5	Solutions to the quick exercises	191
13.6	Exercises	191
14	The central limit theorem	195
14.1	Standardizing averages	195
14.2	Applications of the central limit theorem	199
14.3	Solutions to the quick exercises	202
14.4	Exercises	203
15	Exploratory data analysis: graphical summaries	207
15.1	Example: the Old Faithful data	207
15.2	Histograms	209
15.3	Kernel density estimates	212
15.4	The empirical distribution function	219
15.5	Scatterplot	221
15.6	Solutions to the quick exercises	225
15.7	Exercises	226
16	Exploratory data analysis: numerical summaries	231
16.1	The center of a dataset	231
16.2	The amount of variability of a dataset	233
16.3	Empirical quantiles, quartiles, and the IQR	234
16.4	The box-and-whisker plot	236
16.5	Solutions to the quick exercises	238
16.6	Exercises	240
17	Basic statistical models	245
17.1	Random samples and statistical models	245
17.2	Distribution features and sample statistics	248
17.3	Estimating features of the “true” distribution	253
17.4	The linear regression model	256
17.5	Solutions to the quick exercises	259
17.6	Exercises	259

18	The bootstrap	269
	18.1 The bootstrap principle	269
	18.2 The empirical bootstrap	272
	18.3 The parametric bootstrap	276
	18.4 Solutions to the quick exercises	279
	18.5 Exercises	280
19	Unbiased estimators	285
	19.1 Estimators	285
	19.2 Investigating the behavior of an estimator	287
	19.3 The sampling distribution and unbiasedness	288
	19.4 Unbiased estimators for expectation and variance	292
	19.5 Solutions to the quick exercises	294
	19.6 Exercises	294
20	Efficiency and mean squared error	299
	20.1 Estimating the number of German tanks	299
	20.2 Variance of an estimator	302
	20.3 Mean squared error	305
	20.4 Solutions to the quick exercises	307
	20.5 Exercises	307
21	Maximum likelihood	313
	21.1 Why a general principle?	313
	21.2 The maximum likelihood principle	314
	21.3 Likelihood and loglikelihood	316
	21.4 Properties of maximum likelihood estimators	321
	21.5 Solutions to the quick exercises	322
	21.6 Exercises	323
22	The method of least squares	329
	22.1 Least squares estimation and regression	329
	22.2 Residuals	332
	22.3 Relation with maximum likelihood	335
	22.4 Solutions to the quick exercises	336
	22.5 Exercises	337

23	Confidence intervals for the mean	341
	23.1 General principle	341
	23.2 Normal data	345
	23.3 Bootstrap confidence intervals	350
	23.4 Large samples	353
	23.5 Solutions to the quick exercises	355
	23.6 Exercises	356
24	More on confidence intervals	361
	24.1 The probability of success	361
	24.2 Is there a general method?	364
	24.3 One-sided confidence intervals	366
	24.4 Determining the sample size	367
	24.5 Solutions to the quick exercises	368
	24.6 Exercises	369
25	Testing hypotheses: essentials	373
	25.1 Null hypothesis and test statistic	373
	25.2 Tail probabilities	376
	25.3 Type I and type II errors	377
	25.4 Solutions to the quick exercises	379
	25.5 Exercises	380
26	Testing hypotheses: elaboration	383
	26.1 Significance level	383
	26.2 Critical region and critical values	386
	26.3 Type II error	390
	26.4 Relation with confidence intervals	392
	26.5 Solutions to the quick exercises	393
	26.6 Exercises	394
27	The t-test	399
	27.1 Monitoring the production of ball bearings	399
	27.2 The one-sample t -test	401
	27.3 The t -test in a regression setting	405
	27.4 Solutions to the quick exercises	409
	27.5 Exercises	410

28 Comparing two samples 415

 28.1 Is dry drilling faster than wet drilling? 415

 28.2 Two samples with equal variances 416

 28.3 Two samples with unequal variances 419

 28.4 Large samples 422

 28.5 Solutions to the quick exercises 424

 28.6 Exercises 424

A Summary of distributions 429

B Tables of the normal and *t*-distributions 431

C Answers to selected exercises 435

D Full solutions to selected exercises 445
