

# Appendix A

## Matrices

### Definition

A *matrix* is an array of numbers subject to certain operations. For example,

$$\begin{bmatrix} 3 & 2 & 9 & 7 \\ 0 & -63 & 49 & 5 \\ 1 & 5 & 4 & 8 \end{bmatrix} \quad \text{3 rows, 4 columns}$$

$$\begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \cdots & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mn} \end{bmatrix} \quad \text{m rows, n columns}$$

The  $a_{ij}$  are called the *elements* of the matrix.

### Notation

$$A = [A] = (a_{ij}) = [a_{ij}]_{m,n}$$

### Null Matrix

In a *null matrix*, all the elements are zero, that is,

$$[N] = [0]$$

Any matrix multiplied by a null matrix results in a null matrix. Thus,

$$[A][N] = [N]$$

## Square Matrix

The number of rows, called the *order* of the matrix, is equal to the number of columns. For example,

$$[A] = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{bmatrix}$$

is a square matrix of order 2.

## Determinant

Associated with every square matrix  $[A]$ , there is a numerical value called its *determinant*,  $|A|$ .

$$[A] = a_{ij}(\text{cof } a_{ij})$$

where  $\text{cof } a_{ij} = (-1)^{i+j}|M_{ij}|$ .  $\text{cof } a_{ij}$  is the *cofactor* of  $a_{ij}$  and  $M_{ij}$  is the *minor* of  $a_{ij}$ , obtained by eliminating the row and the column of  $a_{ij}$ .

Consider the matrix

$$[A] = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{bmatrix}$$

$$\text{Determinant } [A] = \begin{vmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{vmatrix}$$

$$\text{cof } a_{11} = (-1)^2|M_{11}| = M_{11} = a_{22}$$

$$\text{cof } a_{12} = (-1)^3|M_{12}| = -M_{12} = -a_{21}$$

$$\text{cof } a_{21} = (-1)^3|M_{21}| = -M_{21} = -a_{12}$$

$$\text{cof } a_{22} = (-1)^4|M_{22}| = M_{22} = a_{11}$$

$$\begin{aligned} |A| &= \sum_{i=1}^n a_{ij}(\text{cof } a_{ij}) = a_{11}a_{22} + a_{12}(-a_{21}) \\ &= a_{11}a_{22} - a_{12}a_{21} \end{aligned}$$

Another example is

$$[A] = \begin{bmatrix} 1 & 2 & -1 \\ 3 & 4 & 0 \\ 0 & 3 & 2 \end{bmatrix}$$

$$\text{cof } a_{11} = M_{11} = \begin{vmatrix} 4 & 0 \\ 3 & 2 \end{vmatrix} = 8 - 0 = 8$$

$$\text{cof } a_{12} = -M_{12} = \begin{vmatrix} 3 & 0 \\ 0 & 2 \end{vmatrix} = -6 + 0 = -6$$

$$\text{cof } a_{13} = M_{13} = \begin{vmatrix} 3 & 4 \\ 0 & 3 \end{vmatrix} = 9 - 0 = 9$$

$$|A| = 1 \times 8 + 2 \times (-6) - 1 \times 9 = 8 - 12 - 9 = -13$$

## Diagonal Matrix

A square matrix whose nondiagonal elements are zero is called a *diagonal matrix*.

$$a_{ij} = 0 \quad \text{for } i \neq j$$

For example,

$$\begin{bmatrix} 3 & 0 & 0 \\ 0 & 2 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

## Identity Matrix

A diagonal matrix whose elements are unity is called an *identity matrix*.

$$[I] = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$[I][A] = [A]$$

## Column or Row Matrix

All the elements in a column or row matrix are arranged in the form of a column or row. For example,

$$\begin{array}{l} \text{column matrix} \left[ \begin{array}{c} a_1 \\ a_2 \\ \vdots \\ a_n \end{array} \right] \\ \text{row matrix} \quad [b_1 \quad b_2 \quad \cdots \quad b_n] \end{array}$$

## Transpose Matrix

The substitution of columns by rows of the original matrix produces a *transpose matrix*. The transpose of a row matrix is a column matrix and vice versa. For example,

$$[A] = \begin{bmatrix} 0 & -5 & 1 \\ 8 & 4 & 2 \end{bmatrix} \quad [A]^T = \begin{bmatrix} 0 & 8 \\ -5 & 4 \\ 1 & 2 \end{bmatrix}$$

$$[a] = [2 \quad 3 \quad -7] \quad [a]^T = \begin{bmatrix} 2 \\ 3 \\ -7 \end{bmatrix}$$

$$[AB]^T = [B]^T[A]^T$$

## Symmetric Matrix

A square matrix is *symmetric* if it is equal to its transpose, that is,

$$A^T = A$$

$$a_{ij} = a_{ji} \quad \text{for all } i \text{ and } j$$

## Antisymmetric or Skew-Symmetric Matrix

$$A^T = -A$$

$$a_{ij} = -a_{ji} \quad \text{for all } i \text{ and } j$$

For  $i = j$ ,  $a_{ii} = -a_{ii}$ , that is, the diagonal elements of a skew-symmetric matrix are zero.

## Singular Matrix

A square matrix whose determinant is zero is called a *singular matrix*.

## Inverse Matrix

$[A]^{-1}$  is the inverse matrix of  $[A]$  such that

$$[A][A]^{-1} = [I] = [A]^{-1}[A]$$

$$[A]^{-1} = \frac{1}{[A]} [\text{cof } A]^T$$

We now give some examples of inverse matrix determination.

*Example 1*

$$A = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{bmatrix}$$

$$[A]^{-1} = \begin{bmatrix} a_{22} & -a_{12} \\ -a_{21} & a_{11} \end{bmatrix} \frac{1}{a_{11}a_{22} - a_{12}a_{21}}$$

*Example 2*

$$A = \begin{bmatrix} a_{11} & 0 & \cdots & 0 \\ 0 & a_{22} & \cdots & 0 \\ \vdots & \vdots & \cdots & \vdots \\ 0 & 0 & \cdots & a_{nn} \end{bmatrix}$$

$$A^{-1} = \begin{bmatrix} 1/a_{11} & 0 & \cdots & 0 \\ 0 & 1/a_{22} & \cdots & 0 \\ \vdots & \vdots & \cdots & \vdots \\ 0 & 0 & \cdots & 1/a_{nn} \end{bmatrix}$$

*Example 3*

$$A = \begin{bmatrix} \cos \theta & -\sin \theta \\ \sin \theta & \cos \theta \end{bmatrix}$$

$$|A| = \cos^2 \theta + \sin^2 \theta = 1$$

$$A^{-1} = \begin{bmatrix} \cos \theta & \sin \theta \\ -\sin \theta & \cos \theta \end{bmatrix}$$

*Example 4*

$$T = \begin{bmatrix} m^2 & n^2 & 2mn \\ n^2 & m^2 & -2mn \\ -mn & mn & m^2 - n^2 \end{bmatrix} \begin{array}{l} m = \cos \theta \\ n = \sin \theta \end{array}$$

There is a very important matrix called the *transformation matrix*:

$$|A| = 1$$

$$T^{-1} = \begin{bmatrix} m^2 & n^2 & -2mn \\ n^2 & m^2 & 2mn \\ mn & -mn & m^2 - n^2 \end{bmatrix}$$

Note that  $T^{-1}$  is obtained by replacing  $\theta$  by  $-\theta$  in  $T$ .

## Some Basic Matrix Operations

The equality  $[A] = [B]$  is valid if and only if  $a_{ij} = b_{ij}$ .

### *Addition and Subtraction*

To perform the operations of addition or subtraction, the matrices must be *compatible*, that is, they must have the same dimension:

$$[A] + [B] + [C] = [D]$$

$$a_{ij} + b_{ij} + c_{ij} = d_{ij}$$

Similarly,

$$\begin{aligned} [E] &= [A] - [B] \\ e_{ij} &= a_{ij} - b_{ij} \end{aligned}$$

### ***Multiplication***

To perform the operation of multiplication, the number of columns of one matrix must be equal to the number of rows of the other matrix:

$$[A]_{m \times n} [B]_{n \times r} = [C]_{m \times r}$$

$$c_{ij} = \sum_{k=1}^n a_{ik} b_{kj}$$

$$\begin{bmatrix} 3 & 5 \\ 9 & 8 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ 4 & 3 \end{bmatrix} = \begin{bmatrix} 3 \times 1 + 5 \times 4 & 3 \times 0 + 5 \times 3 \\ 9 \times 1 + 8 \times 4 & 9 \times 0 + 8 \times 3 \end{bmatrix} = \begin{bmatrix} 23 & 15 \\ 41 & 24 \end{bmatrix}$$

Matrix multiplication is associative and distributive but not commutative. Thus,

$$[AB][C] = [A][BC]$$

$$[A][B + C] = [A][B] + [A][C]$$

$$[A][B] \neq [B][A]$$

The order of the matrix is very important in matrix multiplication.

# Appendix B

## Fiber Packing in Unidirectional Composites

### Geometrical Considerations

Consider a composite containing uniaxially aligned fibers. Assume for the sake of simplicity that the fibers have the same cross-sectional form and area. Then for any uniaxial arrangement of fibers, we can relate the fiber volume fraction  $V_f$ , the fiber radius  $r$ , and the center-to-center spacing of fibers  $R$  as

$$V_f = \alpha \left(\frac{r}{R}\right)^2$$

where  $\alpha$  is a constant that depends on the geometry of the arrangement of fibers.

Let  $S$  be the distance of closest approach between the fiber surfaces. Then

$$S = 2(R - r)$$

or

$$S = 2 \left[ \left(\frac{\alpha}{V_f}\right)^{1/2} r - r \right] = 2r \left[ \left(\frac{\alpha}{V_f}\right)^{1/2} - 1 \right]$$

Thus, the separation between two fibers is less than a fiber diameter when

$$\left[ \left(\frac{\alpha}{V_f}\right)^{1/2} - 1 \right] < 1$$

or

$$\left(\frac{\alpha}{V_f}\right)^{1/2} < 2$$

**Table B.1** Geometrical fiber packing parameters

Arrangement	$\alpha$	$\alpha/4$	$V_{f_{\max}}$
Hexagonal	$\frac{\pi}{2\sqrt{3}} = 0.912$	0.228	0.912
Square	$\frac{\pi}{4} = 0.785$	0.196	0.785

or

$$\frac{\alpha}{V_f} < 4$$

or

$$V_f > \frac{\alpha}{4}$$

The densest fiber packing  $V_{f_{\max}}$  corresponds to touching fibers, that is,

$$\left[ \left( \frac{\alpha}{V_{f_{\max}}} \right)^{1/2} - 1 \right] = 0$$

or

$$V_{f_{\max}} = \alpha$$

Table B.1 shows the values of  $\alpha$ ,  $\alpha/4$ , and  $V_{f_{\max}}$  for hexagonal and square arrangements of fibers.

# Appendix C

## Some Important Units and Conversion Factors

### Stress (or Pressure)

- 1 dyn =  $10^5$  newton (N)
- 1 N m<sup>-2</sup> = 10 dyn cm<sup>-2</sup> = 1 pascal (Pa)
- 1 bar =  $10^5$  N m<sup>-2</sup> =  $10^5$  Pa
- 1 hectobar = 100 bars =  $10^8$  cm<sup>-2</sup>
- 1 kilobar =  $10^8$  N m<sup>-2</sup> =  $10^9$  dyn cm<sup>-2</sup>
- 1 mmHg = 1 torr = 133.322 Pa = 133.322 N m<sup>-2</sup>
- 1 kgf mm<sup>-2</sup> = 9806.65 kN m<sup>-2</sup> = 9806.65 kPa = 100 atmospheres
- 1 kgf cm<sup>-2</sup> = 98.0665 kPa = 1 atmosphere
- 1 lb in.<sup>-2</sup> = 6.89476 kN m<sup>-2</sup> = 6.89476 kPa
- 1 kgf cm<sup>-2</sup> = 14.2233 lb in.<sup>-2</sup>
- $10^6$  psi =  $10^6$  lb in.<sup>-2</sup> = 6.89476 GN m<sup>-2</sup> = 6.89476 GPa
- 1 GPa = 145,000 psi

### Density

- 1 g cm<sup>-3</sup> = 62.4280 lb ft<sup>-3</sup> = 0.0361 lb in<sup>-3</sup>
- 1 lb in<sup>-3</sup> = 27.68 g cm<sup>-3</sup>
- 1 g cm<sup>-3</sup> =  $10^3$  kg m<sup>-3</sup>

### Viscosity

- 1 poise = 0.1 Pa s = 0.1 N m<sup>-2</sup> s
- 1 GN m<sup>-2</sup> s =  $10^{10}$  poise

## Energy

$$1 \text{ erg cm}^{-2} = 1 \text{ mJ m}^{-2} = 10^{-3} \text{ J m}^{-2}$$

$$10^8 \text{ erg cm}^{-2} = 47.68 \text{ ft lb in.}^{-2} = 572.16 \text{ psi in}$$

## Fracture Toughness

$$1 \text{ psi in}^{1/2} = 1 \text{ lbf in}^{-3/2} = 1.11 \text{ kN m}^{-3/2} = 1.11 \text{ kPa m}^{-1/2}$$

$$1 \text{ ksi in}^{1/2} = 1.11 \text{ MPa m}^{-1/2}$$

$$1 \text{ MPa m}^{-1/2} = 0.90 \text{ ksi in}^{1/2}$$

$$1 \text{ kgf mm}^{-2} \text{ mm}^{1/2} = 3.16 \times 10^4 \text{ N m}^{-2} \text{ m}^{1/2}$$

# Subject Index

## A

Abalone, 503, 504  
Ablative properties, 302  
Action-in-parallel, 339, 340  
Action-in-series, 340, 341  
Addition polymerization, 73, 74  
Advanced fibers, 7, 15, 16  
Advantages of composite materials, 486  
Aging of metal matrix composites, 222–224, 230  
Airbus A380, 507  
Alumina, 7, 9, 10, 14, 50–54, 67, 95, 98, 99, 101  
Aluminum acetate, 52  
Aluminum alloys, 90, 96  
Aluminum carbide, 219, 239, 244  
Aluminum/SiC, 498  
Amorphous structure, 14, 61  
Anisotropy, elastic, 342  
Aramid aluminum laminates (ARALL), 507, 508  
Aramid fibers  
    chemical structure, 41, 46  
    dry jet-wet spinning, 11, 41, 43, 45  
    knotted, 48  
    polymer interfaces, 162–163  
    processing, 11, 41–46  
    properties and applications, 49–50  
    structure, 41, 42, 46–49  
    supramolecular structure, 47  
Arrhenius-type relationship, 117  
Aspect ratio, 357, 362, 380, 381  
A-15 superconductors, 317–321  
Atomic registry, 105, 110, 111  
Autoclave, 145–148, 172, 179  
Autoclave-based methods, 145–148  
Autonomic healing, 500, 501  
Avimid K, 87

## B

Bag molding processes, 145  
Ballistic protection, 178  
Barium titanate, 506  
Basal plane, 26, 32, 33  
Bending matrix, 408, 409  
Bend tests, 119–123  
Biocomposites, 497, 503  
Bioresins, 503  
Birefringent solution, 42  
Bismaleimides (BMI), 84  
Boeing787  
    aspect ratio, 180  
    wing, 143, 148, 179, 180, 189  
Bonding  
    types of, at interfaces, 113–117  
    wettability vs., 106–110  
Bone, 3  
Boron, 7, 12, 15–24, 51, 56, 59, 64, 68  
Boron fiber(s)  
    fabrication, 16–19, 21  
    fracture characteristics, 22  
    morphology, 19–21  
    processing, 16–19, 21, 22  
    properties and applications, 22–24  
    residual stresses, 21  
    structure, 16, 18–21  
Boundary layer phenomenon, 416  
Brakes, 294, 302–306  
Brittleness, 310, 317, 321, 322  
Bronze route, 318, 319, 322  
Buckling, 422–425

## C

Calcium carbonate ( $\text{CaCO}_3$ ), 503  
Candle-type filter, 287, 289

- Carbon, 7, 8, 12, 15, 16, 19, 23–36, 39, 48, 51, 55–57, 59, 61, 63, 65–68
- Carbon/aluminum composites, 220, 237, 238
- Carbon black, 293
- Carbon/carbon brakes, 303–305
- Carbon/carbon composites  
 applications, 294, 296, 297, 301–303, 305–306  
 frustum, 301, 302, 305  
 processing, 293–297, 301, 303  
 properties, 293, 294, 296, 298–302
- Carbon fiber composites  
 applications, 154, 186  
 civil infrastructure applications, 154, 187–188  
 interfaces, 158–163  
 mechanical properties, 154, 166, 168  
 properties, 158, 159, 166, 168, 174, 181, 182, 186, 189  
 sporting goods, 154, 184
- Carbon fiber/epoxy composites, 154, 159–161, 168, 174, 179, 182, 183, 187, 189
- Carbon fiber reinforced (CARE), 507
- Carbon fibers  
 ex-cellulose, 28–29  
 ex-PAN, 26–28, 35  
 ex-pitch, 29–30, 35  
 processing, 24, 26, 34  
 properties and applications, 32–36  
 structural changes during processing, 31–32  
 tensile failure, 32, 33
- Carbonization, 24, 25, 27–31
- Carboxyl-terminated butadiene-acrylonitrile copolymers (ctbn), 89, 90
- CARE. *See* Carbon fiber reinforced (CARE)
- Carpet plots, 488, 489
- CDS. *See* Characteristic damage state (CDS)
- Cellulose, 26, 28, 63
- Ceramic, 497, 504, 506
- Ceramic composite filters, 287–288
- Ceramic fibers, 7, 9, 14, 50–55, 58, 64, 66, 68
- Ceramic fiber strength, high-temperature exposure, 66
- Ceramic matrix composites (CMCs)  
 applications, 249–251, 254, 255, 258, 261, 267, 269, 273, 286–289  
 interfaces, 249, 257, 260, 263, 269–273, 276–278, 281–285  
 processing, 249–269, 271, 279, 283  
 properties, 249, 251, 257, 261, 264, 273–275  
 thermal shock resistance, 286, 287, 289  
 toughening mechanisms, 276, 277  
 toughness, 249, 257, 272, 273, 275–285, 287, 289
- Ceramic matrix materials  
 bonding and structure, 98–100  
 effect of flaws on strength, 100–101
- Ceramic superconductors, 310, 311, 321–328
- Characteristic damage state (CDS), 468
- Chemical bonding, 114, 116–117, 217–223  
 at interfaces, 116  
 in metal matrix composites, 197–244
- Chemical bridge theory, 156
- Chemical vapor deposition (CVD) technique, 17, 259, 261, 294  
 for silicon carbide fibers, 55–58
- Chemical vapor impregnation (CVI), 259–261
- Civil infrastructure applications of carbon fiber composites, 187–188
- Clays, 498, 499
- Cloisite<sup>®</sup>, 498
- Coefficient of thermal expansion (CTE), 15, 23, 35, 62, 67, 68, 214, 229, 236, 238, 240, 349, 353–358, 360, 363, 367, 385  
 of composite materials, 354–358
- Coherent interfaces, 111
- Coking, 63
- Cold pressing and sintering, 250
- Commingle fibers, 150–151
- Compliances, 391, 396–398
- Composite materials, 3–5, 422, 440, 451, 471  
 advantages, 486  
 definition, 5  
 density, 337–339  
 design, 487–493  
 elastic constants, 342–344  
 fatigue, under compression, 351, 459  
 fracture modes, 425–432  
 fundamental characteristics, 487  
 hygral and thermal stresses, 349, 362–371, 409, 493–194  
 laminated (*see* Laminated composites)  
 macromechanics, 344, 387–417, 487  
 mechanical properties, 339–352  
 micromechanics, 337–381  
 multifilamentary superconducting (*see* Multifilamentary superconducting composites)  
 particulate (*see* Particulate composites)  
 thermal conductivity, 358–362  
 thermal expansion coefficients, 349, 353–356, 358, 360

thermal properties, 352–371  
 thermal stresses, 349, 362–371  
 unidirectional fiber (*see* Unidirectional fiber composites)  
 Compressive strength of unidirectional fiber composites, 422–425  
 Compressive tests, longitudinal and transverse, 445  
 Condensation polymerization, 73, 74, 82  
 Constitutive relationships for laminated composites, 404–413  
 Contact angle, 106–108, 115  
   hysteresis, 106  
 Contracted matrix notation, 389  
 Coupling phenomena, 487, 491  
 Crack, 500, 501, 503, 506–509  
   deflection along interfaces, 431  
   deflection criteria, 278  
   deflection mechanism, 277  
   growth rate, 463  
 Creep, 270, 274, 275, 281  
   of ceramic matrix composites, 459  
   of metal matrix composites, 462  
 Critical fiber, 428  
 Critical length of fibers, 129, 357  
 Crosslinking, 74, 76, 77, 81, 82, 84, 87  
 Cryogenic stability, design concept, 312  
 Cryostabilization design concept, 312  
 Crystallinity, 36, 40  
   degree of, 11, 38  
 Crystallites, 76  
 Crystallographic nature of interfaces, 110–111  
 CTE. *See* Coefficient of thermal expansion (CTE)  
 Cumulative weakening model of failure, 440  
 Curv<sup>®</sup>, 502  
 Curved neck specimen test, 125  
 Cutting tool inserts, 287  
 CVD. *See* Chemical vapor deposition technique (CVD)  
 CVI. *See* Chemical vapor impregnation (CVI)  
 Cyclic fatigue, 451, 459–462  
  
**D**  
 Damage, 451–453, 459–461, 464–473, 477, 500, 501, 506  
 Damage mechanics of fatigue, 464–471  
 Damage zones, 452, 453, 461, 464, 468  
 Darcy's law, 142, 149, 206, 209  
 Debonding, 427–432  
 Debulking, 164

Delamination, 452, 459, 464, 466–468  
 Delamination fractures, 427–432  
 Density, 294–297, 304  
 Density of composite materials, 337–339  
 Designing with composite materials, 485–495  
 Diaphragm forming, 149–150  
 Diesel piston crown, 240  
 Diffusion bonding, 209–211, 218, 242  
 Diffusivity, 112, 117  
 DIMOX process, 256, 258  
 Directed oxidation process, 256–259  
 Direct hot-melt process, 146  
 Dislocations, 91–96, 100, 201, 215, 222, 228–231, 235, 236, 238, 239, 274, 276, 366–368  
 Dissolution bonding, 114, 116  
 Dope, 43, 59  
 Double cantilever beam specimen, 500  
 Dry jet-wet spinning, 11, 41, 43, 45  
 Dry spinning, 10, 43, 53, 59  
 Duralcan process, 202  
 Dyneema, 163, 178

## E

Edge-defined film-fed growth (EFG), 53  
 Edge effects, 491  
 Edge effects in laminae, 415–417  
 EFG. *See* Edge-defined film-fed growth (EFG)  
 E glass fiber, 11, 12, 15, 68  
 Elastic anisotropy, 282, 284, 342  
 Elastic constants, 342–345, 351  
   of composite materials, 339–343, 373–381  
   of isotropic materials, 390  
   of laminae, 409  
 Elastic modulus, 9–11, 26, 28, 50, 66  
 Elastomers, 78, 79, 90  
 Electromagnetic shielding, 186  
 Electron beam curing, 137  
 Electronic-grade metal matrix composites, 241–243  
 Electrophoresis, 267  
 Electrophoretic deposition (EPD), 267, 268  
 Electroplating, 211  
 Engineering elastic constants, 397  
 Environmental moisture, 168  
 EPD. *See* Electrophoretic deposition (EPD)  
 Epoxy, 77, 80–84, 86–90  
 Eshelby method, 345  
 Ex-cellulose carbon fibers, 28–29  
 Exfoliation, 498  
 Ex-PAN carbon fibers, 26–28, 35  
 Ex-pitch carbon fibers, 29–30, 35

**F**

Failure criteria, 441, 447  
 comparison of, 446–447  
 Failure, cumulative weakening model of, 437  
 Fatigue, 504, 507–509  
 crack propagation tests, 458, 479  
 cyclic, 451, 459–462  
 damage mechanics, 464–471  
 low-cycle, 459, 462  
 parameters for, 453  
 S-N curves, 451, 453–457, 479  
 static, 16  
 thermal, 471–473, 479  
 Fiber(s), 105, 106, 108–112, 114–130  
 advanced, 7, 15, 16  
 aspect ratio, 379, 380  
 characteristics, 8, 15, 21, 23, 35, 42, 48–50,  
 57, 67, 68  
 commingled, 150–151  
 critical length, 124, 129, 357  
 stretching and orientation, 11  
 Fiber bundle strength, 434–437  
 Fiberization procedure, 25  
 Fiber length, 357, 375, 377–379  
 Fiber metal laminate (FML), 503, 506, 507  
 Fiber microbuckling, 424, 425  
 Fiber packing, 376  
 geometry, 345, 375  
 Fiber placement systems, 144–145  
 Fiber pullout, 270, 271, 273, 275–277,  
 279–285, 427–432  
 Fiber reinforced laminate, 387, 401  
 Fiber spinning processes, 8, 10–11  
 Fiber strength, 424, 427, 428, 432–440  
 variability of, 432–440  
 Fiber stress, average, 380  
 Fiber surface area, 105  
 Fiber ultimate tensile strength, 441  
 Fick's law, 168, 170  
 Fiexure tests, 23  
 Filament winding, 138–140, 164, 190  
 Film calendaring process, 146  
 Film stacking, 149  
 First-stage extrusion, 318  
 Flakes, 498  
 Flexibility, 8–10, 24, 46, 67  
 Flexural tests, 119–122  
 Flexure-twisting coupling, 409  
 Flux motion, 312, 314  
 Flux pinning, 311–312, 314–316, 319  
 FML. *See* Fiber metal laminate (FML)  
 FOD. *See* Foreign object damage (FOD)  
 Foil-fiber-foil process, 209

Foreign object damage (FOD), 181  
 Four-point bending, 121–123  
 Fracture(s)  
 delamination, 427–432  
 modes, 425–432  
 monotonic strength and, 421–448  
 single and multiple, 425–427  
 toughness, 430, 431  
 Fragmentation test, 129–130  
 Frictional properties, 302  
 Fullerene, Buckminster, 24

**G**

Gel(s), 14, 38, 39, 51–53  
 Gel-spun polyethylene fibers, 7, 40  
 GEx engine, 181, 183  
 Glass aluminum laminates (GLARE)  
 applications, 508  
 fatigue behavior, 508  
 Glass-ceramic materials, 99  
 Glasses, 75, 76, 80–83, 89–91, 98–101  
 Glass fiber(s)  
 compositions, 11, 12, 14  
 fabrication, 12–15  
 forms, 13–15  
 properties and applications, 15–16  
 schematic of manufacture, 12  
 structure, 14, 15  
 Glass fiber/polymer interfaces, 155–158  
 Glass fiber reinforced resins, 4  
 Glass-reinforced plastics (GRP), 16  
 Glass transition temperature, 75–76, 81, 83,  
 90, 100  
 Glassy phase(s), 460, 461, 478  
 intergranular, 460  
 Grain and substructure strengthening, 228  
 Graphite, 293, 303–305  
 Graphite structure, turbostratic, 27  
 Graphitic structure, 25  
 Graphitization, 24, 25, 28, 29, 32, 34  
 Griffith relationship, 100  
 GRP. *See* Glass-reinforced plastics (GRP)  
 Guinier–Preston (G–P) zones, 111

**H**

Hall–Petch relationship, 94  
 Halpin–Tsai–Kardos equations, 359  
 Hand lay-up and spray techniques, 138,  
 139, 142  
 High-density polyethylene (HDPE), 38  
 High pressure processing, 296–297

- High-temperature exposure of ceramic fiber(s), 66
- HIP. *See* Hot isostatic pressing (HIP)
- Homopolymers, 77
- Hooke's law, 349, 363, 365, 388, 389, 392, 398, 400
- Hot isostatic pressing (HIP), 210
- Hot pressing, 250–253, 263, 269, 270, 276, 277, 279, 287–289
- Hybrid composites, 146, 506–509
- Hygral stresses, 362
- Hygroscopy, 362
- Hygrothermal stresses, 362, 364
- I**
- Immiscible platelets, 499
- Incoherent interfaces, 111
- Indentation tests, instrumented, 126–129
- Indenters, types of, 126

 bonding *vs.*, 107
- Whiskerization, 160
- Wind energy, 188–190
- Windmill  
 dynamic testing, 191  
 figure of merit, 189  
 power, 189, 190  
 protection against lightning, 191  
 rotor blades, 190  
 static testing, 191
- Wood, 3, 5
- Work hardening of matrix, 229, 379
- X**
- XDT process, 212
- Y**
- Yajima process, 58, 61
- Young’s equation, 9
- Young’s modulus, 166, 189, 199, 216, 222, 225, 226, 274, 275, 283, 286, 293  
 of ceramic matrix composites, 249–289  
 longitudinal, 339–341, 345, 348, 349  
 of metal matrix composites, 197–244  
 of polymer matrix composites, 137–193  
 transverse, 341
- Z**
- Zeta potential, 267
