

An Evanescent Particle (1997). Pérez Celis, Argentine painter (1939–2008). Starting from the *bottom*, this beautiful picture conveys the image of the linear combination (2.29), representing a particle exiting from the intermediate screen in a two-slit experiment (Fig. 2.5). Both *green* and *brown* components display a definite wave length, as befits a plane wave. Environment effects become effective after traveling some distance, resulting in a classical, decohered, single component. This picture belongs to the collection of Banco de la Nación Argentina, and is reproduced with authorization from this institution and from Pérez Celis' family
