
Index

A

Application of the model, 24

B

Behaviour anomaly test, 140–141
Behaviour reproduction test, 139, 140
Behaviour sensitivity test, 141–143
Boundary adequacy test, 137–138

C

Case studies, 165–177
 modeling of boom and bust of cocoa
 production systems in Malaysia, 165
 modeling of food security in Malaysia, 199
 modeling of hilsa fish population in
 Bangladesh, 179
 modeling of solid waste management
 systems at Dhaka city
 in Bangladesh, 249
 modeling of supply chain of rice milling
 systems in Bangladesh, 217
Causal loop diagrams, 21–22, 37–41, 43, 44,
46–51, 168, 169, 181, 202, 203,
220–222, 252–253
 boom and bust of cocoa production systems
 in Malaysia, 166–169
 carbon metabolism in green plants, 41–42
 cause-effect relationships, 37–39
 electricity supply, 47–48
 fishery dynamics, 45–46
 food security in Malaysia, 202, 203
 food security model, 42–44
 forest dynamics, 46–47
 global warming, 48–51
 hilsa fish population in Bangladesh, 182
 population model, 41

 price determination of a commodity, 43–45
 solid waste management systems at Dhaka
 city in Bangladesh, 253
 steps in causal loop diagrams, 39–40
 supply chain of rice milling systems in
 Bangladesh, 220–222
Changed behaviour prediction test, 144–145
Commodity production cycle model, 81–86
Conversion factors, 125–126
Converter, 56
COS, 65
Crop irrigation model, 102–107
Crop livestock model, 89–93

D

Delays, 57–58
 choice of delay function, 57–58
 information delay, 67–70
 material delay, 69–72
 role of delay, 57
Differential equation model, 27–28
Dimensional consistency test, 138
Dynamic hypothesis, 20–21, 166–168,
181–182, 202, 220, 252
 boom and bust of cocoa production systems
 in Malaysia, 168
 food security in Malaysia, 202
 hilsa fish population in Bangladesh, 182
 solid waste management systems at Dhaka
 city in Bangladesh, 252
 supply chain of rice milling systems in
 Bangladesh, 220

E

Electricity supply, 47–48
Extreme condition test, 137, 138

F

- Feedback systems, 5–7
 - classification, 5
 - negative, 6
 - positive, 6
- Fishery dynamics, 45–46
- Flow, 55–56
- Food relief model, 86–89
- Food security model, 42–44, 77–81
- Forest dynamics, 46–47
- Functions containing integration, 66–72
 - information delay, 67–70
 - material delay, 69–72
 - SMOOTH, 66–67
- Functions without integration, 62–66
 - EXP, 63
 - graphical function, 63–65
 - LOGN, 63
 - SQRT, 63

G

- Grain storage system, 75–77
- Graphical function, 63, 65

H

- Hilsa fish, 179–182, 184, 185, 187, 188, 191, 193, 195, 197

I

- Identification of stock and flow, 59
- Information delay, 67–70
- Introduction, 3–13

L

- Logical function, 66
- LOGN, 63

M

- Mathematical representation of stock and flow, 59–62
 - Euler's method, 60
 - fourth order Runge–Kutta, 61
 - second order Runge–Kutta, 60, 61
- MAX, 66
- MIN, 66
- Mode of behaviour of dynamic systems, 8–10
 - negative feedback loop, 8
 - positive feedback loop, 8
- Model classification, 11

Modeling

- boom and bust of cocoa production systems
 - in Malaysia, 165–168, 170–176
- food security in Malaysia, 199
- solid waste management systems at Dhaka city in Bangladesh, 249
- hilsa fish population in Bangladesh, 180
- supply chain of rice milling systems
 - in Bangladesh, 217
- Models and simulation, 9, 11
- Model validation, 23–24, 172–174, 187–189, 206–208, 230–232, 264
 - boom and bust of cocoa production systems
 - in Malaysia, 172–173
 - food security in Malaysia, 199–203, 205–209, 212, 214
 - hilsa fish population in Bangladesh, 179–182, 184–191, 193–196
 - solid waste management systems at Dhaka city in Bangladesh, 249–254, 257–268, 270, 271
 - supply chain of rice milling systems in Bangladesh, 217–222, 224–231, 233, 238, 239, 242–245

N

- Normal fractional rates of flow, 126–127

O

- Open systems, 5

P

- Parameter estimation, 23, 119–122, 125–127, 129, 131
 - conversion factor, 125–126
 - normal fractional rate of flow, 126–127
 - sensitivity analysis, 127–129
 - table function, 121–123
 - using aggregated data, 124–127
 - using disaggregated data, 120–122
 - using model equation, 124–127
 - using multiple equation, 127
- Parameter verification test, 136–137
- Participatory system dynamics based scenario planning, 154–156
- Participatory system dynamics modeling, 151–154
- Participatory systems thinking, 25
- Penaeid shrimp model, 93–102
- Policy analysis, 23–24
- Policy design and evaluation, 149, 157

- Policy planning for different development strategies and modeling, 157
- Policy planning for implementation of the development strategies and modeling, 157
- Policy sensitivity test, 145–148
- Pollution model, 108–116
- Population model, 41, 72–74
- Price determination of a commodity, 43–45
- Problem identification, 17–20
- R**
- RANDOM, 65
- S**
- Scenario planning and modeling, 149–157, 160
 - participatory system dynamics based scenario planning, 154–156
 - participatory system dynamics modeling, 151–154
 - policy design and evaluation, 149, 157
 - policy planning for different development strategies and modeling, 157
 - policy planning for implementation of the development strategies and modeling, 157
 - sensitive steps in scenario planning, 156–157
 - some examples of scenario planning and modeling, 158–161
- Sensitivity analysis, 23–24, 127–129
- Simulation and policy analysis, 31–34, 173–177, 188–196, 207–214, 231–244, 264–272
 - boom and bust of cocoa production systems in Malaysia, 173–177
 - food security in Malaysia, 202–214
 - hilsa fish population in Bangladesh, 188–196
 - solid waste management systems at Dhaka city in Bangladesh, 264–272
 - supply chain of rice milling systems in Bangladesh, 232–244
- Solution interval, 62
- Steps in causal loop diagrams, 39–40
- Stock flow diagram, 53–116, 168–172, 183–187, 202–206, 222–230, 254–264
 - boom and bust of cocoa production systems in Malaysia, 168, 170–172
 - choice of delay function, 57–58
 - commodity production cycle model, 81–86
 - converter, 56
 - crop irrigation model, 105–107
 - crop livestock model, 89–93
 - delays, 57–58
 - flow, 55–56
 - food relief model, 86–89
 - food security in Malaysia, 202–206
 - food security model, 77–81
 - functions containing integration, 66–72
 - functions without integration, 62–66
 - grain storage system, 75–77
 - hilsa fish population in Bangladesh, 183–187
 - identification of stock and flow, 59
 - information delay, 67–69
 - material delay, 69–72
 - mathematical representation, 59–62
 - penaeid shrimp model, 93–102
 - pollution model, 108–116
 - population model, 41, 72–74
 - SMOOTH, 66–67
 - solid waste management systems at Dhaka city in Bangladesh, 253–264
 - supply chain of rice milling systems in Bangladesh, 222–230
- Structure verification test, 136
- System dynamics, 5
 - concepts, 5
- Systems, 5
 - closed, 6
 - open, 5
- Systems thinking
 - application of the model, 24
 - causal loop diagrams, 21–22
 - critical aspects, 24
 - dynamic hypothesis, 20–21
 - methodology, 15–24
 - model validation, 23
 - parameter estimation, 23
 - participatory systems thinking, 25
 - policy analysis, 23–24
 - problem identification, 17–20
 - sensitivity analysis, 23–24
 - stock flow diagram, 22, 23, 27–28
- Systems thinking in action, 25–30, 32
- Systems thinking and modeling, 12
- Systems thinking methodology, 15–24

T

- Table function, 121–123
- Test input functions, 65
 - COS, 65
 - MAX, 66
 - MIN, 66
 - PULSE, 65
 - RAMP, 65
 - RANDOM, 65
 - SIN, 65
 - STEP, 65
 - SWITCH, 66
- Tests for confidence building, 133, 134, 136–139, 141–148
- Tests for model behaviour, 139–143
 - behaviour anomaly test, 140–141
 - behaviour reproduction test, 139
 - behaviour sensitivity test, 141–143
- Tests for model structure, 135–138
 - boundary adequacy test, 137–138
 - dimensional consistency test, 138
 - extreme condition test, 137
 - parameter verification test, 136–137
 - structure verification test, 136

- Tests of policy implications, 144–148
 - changed behavior prediction test, 144–145
 - Policy sensitivity test, 145–148

U

- Usefulness of models, 12–13

V

- Verbal description, 17, 165–167, 179–181, 199–201, 217–220, 249–251
 - boom and bust of cocoa production systems in Malaysia, 165–167
 - food security in Malaysia, 199–201
 - hilsa fish population in Bangladesh, 179–181
 - solid waste management systems at Dhaka city in Bangladesh, 249–251
 - supply chain of rice milling systems in Bangladesh, 217–220
