

Part III

Public Health

Learning Objectives

This part of our textbook aims for students to:

- Understand basic terminology and concepts related to public health;
- Understand the basic patterns of excess mortality and morbidity, which can be expected in various emergency and refugee situations, as well as their determinants; and
- Know standard technical/managerial approaches to provide public health, especially as provided by consensus documents.

We add a section on challenges, dilemmas, do's and don'ts at the end of each subchapter to help place this consensus in perspective.
