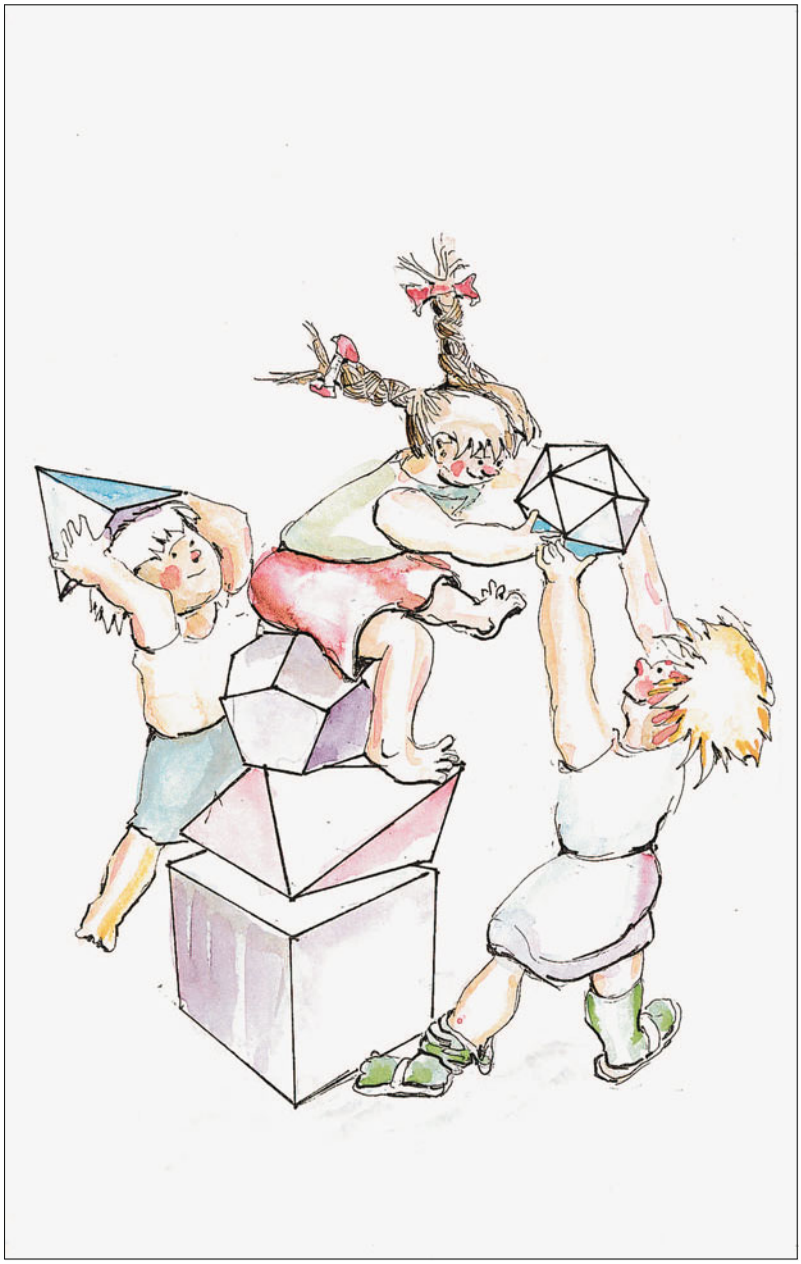
Geometry



10
Hilbert's third problem:
decomposing polyhedra *67*

11
Lines in the plane
and decompositions of graphs *77*

12
The slope problem *83*

13
Three applications
of Euler's formula *89*

14
Cauchy's rigidity theorem *95*

15
The Borromean rings
don't exist *99*

16
Touching simplices *107*

17
Every large point set
has an obtuse angle *111*

18
Borsuk's conjecture *117*

"Platonic solids — child's play!"
